## **Next stop, final proof of life on Mars**

**This week Nasa is sending a probe to the red planet designed to give definitive answers to the big question of space**

Sue Nelson

At 5.35am local time next Friday, a Nasa spacecraft named Phoenix is set to blast off from Cape Canaveral in Florida and begin a 423m-mile journey across the solar system. After travelling through space for 10 months, it is hoped that Phoenix will finally be able to answer one of science's biggest questions by discovering once and for all whether life ever existed on Mars.
